

A recommended selection of courses for the project 3+1 is described below. These courses are taught in English and are selected to fulfil other requirements for international students. A full list of courses given at the department as well as detailed information on the courses can be found on the website:

[www.ibg.uu.se/education/course-programmes/biology-courses/](http://www.ibg.uu.se/education/course-programmes/biology-courses/)

All students within the 3+1 programme will obtain an individual study plan for their studies at Uppsala University. The study counsellor Eva Damm at the Biology Education Center will be support for development of individual study plans. In each period only one 15 credits course can be studied. At Uppsala University full time studies equals 60 credits, four 15 credit-courses, per study year. The full study plan can be developed before or after arrival in Uppsala.

: The first course for the fall (period 1) has to be determined for students before May 1<sup>st</sup> 20 .

The aim of he cour

Period 1: October 27 20 (weeks 36-43)  
 Period 2: October 28-January 19 202 (weeks 44-03)  
 Period 3: January 20-March 23, 202 (weeks 4-12)  
 Period 4: March 24-June 7, 202 (weeks 13-23)

Christmas break: there is a break over Christmas and New Year's and no scheduled teaching between December 20 20 to January 6, 202 . Additional days with no academic schedule 202 are April 30th and May 31<sup>st</sup>.

***Ecolog /Limnolog***

1BG200 Ecology 15hp	1 )	Period 1 Fall 20	
1BG227 Limnology (Inland water) 15hp	1	Period 1 Fall 2020	Can be followed by 1BG305 Applied Ecosystems Ecology
1BG305 Applied Ecosystems Ecology	2 ( )	Period 2 Fall	Can follow on 1BG227 Limnology (Inland water)
1BG203 Animal Structure and function 15hp	1	Period 2 Fall 2020	
1BG319 Behavioural Ecology 15hp	2	Period 3 Spring	Background in ecology and standard statistics (e.g. ANOVA, regression using R or similar)
1BG206 Plant structure and function 15hp	1	Period 3 Spring 2021	
1BG225 Research Training 15hp	1	Period 3 or 4 Spring	
1BG214 Degree Project Bachelor	1	Period 3 or 4 Spring	<input type="checkbox"/>

1BG230 Molecular Biology and Genetics II	1 <sup>a</sup>	Period 3 Spring 2021	
1BG313 Immunology 15hp	2	Period 3 Spring 2021	
1BG207 Neurobiology	1	Period 3 Spring 2021	
1BG225 Research Training 15hp	1	Period 3 Spring	
1BG214 Degree Project Bachelor	1	Period 4 Spring 2021	

See Appendix 3 for Course Syllabuses for Biotechnology/Molecular biology track, page 29

## APPENDIX 1 Course syllabuses for track Ecology

### *Ekologi*

**15 credits**

**Course code:** 1BG200

**Education cycle:** First cycle

**Main field(s) of study and in-depth level:** Biology G2F

**Grading system:** Fail (U), 3, 4, 5.

**Established:** 2007-03-15

**Established by:** The Faculty Board of Science and Technology

**Revised:** 2016-04-25

**Revised by:** The Faculty Board of Science and Technology

**Applies from:** week 27, 2016

**Entry requirements:** 80 credits in biology equivalent to the basic course in biology within the Bachelor Programme in Biology/Molecular Biology, and Floristics and Faunistics, 7.5 credits

**Responsible department:** Biology Education Centre

The course gives an overview of ongoing ecological research and constitutes a basis for second-cycle studies and work within fields requiring knowledge in ecology, ranging from research in evolutionary ecology to practical work in nature conservation. After completing the course, the student should be able to

- account for behavioural-ecological theories of sexual selection, foraging, altruism, cooperation, signalling and communication
- demonstrate understanding of plant and animal life histories
- quantify and interpret diversity patterns
- account for theories of population dynamics, interspecific competition and trophic interactions in food webs
- carry out simple computer simulations of population dynamics
- plan, carry out and statistically evaluate an ecological study and present the results orally and in writing
- critically review and discuss primary scientific texts in Ecology.

Behavioural ecology including the connection between ecology, evolutionary theory, sexual selection and foraging, mating systems, kinship, altruism, cooperation and group living, adaptations to biological enemies, the evolution of signals and communication, and basic life history. Ecology and evolution of plant life histories, covering seed germination and dispersal as well as pollination ecology and an introduction to plant demography. Quantification and interpretation of diversity patterns. Models for population growth and population regulation as well as for interspecific competition and trophic interactions (e.g. Lotka-Volterra models, harvesting models), and food web theory.

The course comprises a field course and a theory part that consists of lectures, computer simulations, calculation exercises and seminars. The course includes integrated communication training with feedback and self-assessment.

Modules: Theory 12 credits; Field course 3 credits;

The theory part is examined through a written examination. Active participation in seminars and exercises is required. The field course is presented both in writing (project report) and orally.

1BG200 Ecology C and 1BG382 Ecology D can not be included in the same degree.

# Syllabus for Limnology

---

*Limnologi*

5 credits

**Course code:** BG227

**Education cycle:** First cycle

**Main field(s) of study and in-depth level:** Biology G2F

**Grading system:** Fail (U), 3, 4, 5.

**Established:** 2014-03-31

**Established by:** The Faculty Board of Science and Technology

**Revised:** 2014-27

**Revised by:** The Faculty Board of Science and Technology

**Applies from:** week 27, 2014

**Entry requirements:** One of the following is required: (1) 80 credits in biology equivalent to the basic course in biology within the Bachelor Programme in Biology/Molecular Biology, or (2) 60 credits in chemistry and at least 5 credits in biology, or (3) 30 credits in earth science and at least 5 credits in biology, and in all three cases Floristics and Faunistics, 7.5 credits.

**Responsible department:** Biology Education Centre

## LEARNING OUTCOMES

The general aim of the course is to give students knowledge of relevance for their future career in limnology, in research or with an applied focus. After completing the course, the student should be able to

- analyse and evaluate abiotic and biotic conditions in aquatic systems
- account for structure and dynamics in biogeochemical cycles and organism communities
- carry out basic sampling and analyses in freshwater field/laboratory systems
- plan and carry out experiment/field studies
- present and evaluate experiment/field studies both orally and in writing.

## CONTENT

The course communicates an ecosystem perspective on inland water, which comprises both physical, chemical and biological parts. Various

## ASSESSMENT

## OTHER DIRECTIVES

Can not at the same time be included with ~~BG180~~ Limnology I D, ~~BG105~~ Limnology D, ~~BG202~~ Limnology I or ~~BG04~~ Limnology L.

# Syllabus for Applied Ecosystem Ecology

---

*Tillämpad ekosystemekologi*

**15 credits**

**Course code:** 1BG305

**Education cycle:** Second cycle

**Main field(s) of study and in-depth level:** Biology A1N

**Grading system:** Fail (U), 3, 4, 5.

**Established:** 2007-03-15

**Established by:** The Faculty Board of Science and Technology

**Revised:** 2015-04-15

**Revised by:** The Faculty Board of Science and Technology

**Applies from:** week 30, 2015

**Entry requirements:** 120 credits including (1) 60 credits in biology and 30 credits in chemistry or 30 credits in earth science, or (2) 90 credits in biology, in both cases, including a second course of 15 credits in ecology or limnology.

**Responsible department:** Biology Education Centre

## LEARNING OUTCOMES

The course builds further on the students' knowledge and experiences from earlier courses in ecology or limnology and aims at communicating an independent and source-critical working method for a future career in research or as professionals within the society, with sustainable development as the general aim. After passing the course the student should be able to

- explain overall structure and function of aquatic and terrestrial ecosystems and interactions between them from a catchment perspective, and motivate the use of catchments as a the basis for nature conservation, environmental protection and other planning purposes in society
- describe and apply the EU Water Framework Directive and generally know how water issues are handled also outside Europe
- handle GPS equipment and geographic information systems using the software ArcGIS
- independently plan, motivate and carry out sampling and analysis for monitoring of water quality in a catchment, and evaluate the result
- explain and distinguish between different forms of anthropogenic influence on aquatic systems and use this in evaluations of nature values and damages on lakes and watercourses
- critically review and communicate theories, complex problems and research results
- identify and discuss aspects related to environmental ethics.

## CONTENT

Applied ecosystem ecology

The course handles catchment areas from an integrated ecosystem perspective, and the following parts are included:

- The hydrological cycling and water as carrier of different substances
- Definition and identification of catchment areas from map material and in field
- Flow analyses of different substances in catchment areas
- The structure and function of different catchment ecosystems, interactions between terrestrial and aquatic ecosystems
- Global carbon cycling and climate change
- Anthropogenically influenced versus natural systems. Effects of different land use on hydrological, chemical and biological processes in soil and water
- Anthropogenic threats to aquatic ecosystems, in the form of hydromorphological changes (construction of dams and dikes, drainage of land), pollution (eutrophication, acidification, dangerous substances), introduction of non-native species and exploitation of species populations.
- Case studies for assessing Natura 2000 object
- Oral and written presentations and group assignment are included in the course

### GIS training

Practical training in handling the software ArcGIS, to a large extent integrated in other parts of the course. An individual GIS project is also included.

### Literature seminar; Water management

from Swedish, European and international perspective.

## INSTRUCTION

The teaching is given as lectures, seminars, computer exercises, laboratory sessions, field exercises and group assignments. Participation in seminars, computer exercises, laboratory sessions, field exercises and group assignments are compulsory. Integrated communication training with feedback and self evaluation is included in the course.

## ASSESSMENT

Modules: Applied ecosystem ecology 8 credits; GIS training 5 credits; Literature seminar 2 credits

Examination of the applied ecosystem ecology is continuously performed during the course through written reports, oral presentations and/or seminars.

Examination of the GIS training is made by written assignments and by individual tasks where the students produce and present an assignment where a GIS map is included. The literature seminar requires active participation in the discussions.

# Syllabus for Research Training in Biology

---

*Forskningspraktik i biologi*

**15 credits**

**Course code:** 1BG225

**Education cycle:** First cycle

**Main field(s) of study and in-depth level:** Biology G2F

**Grading system:** Fail (U), Pass (G).

**Established:** 2012-03-08

**Established by:** The Faculty Board of Science and Technology

**Applies from:** week 27, 2012

**Entry requirements:** Biology, 80 credits equivalent basic course in biology within the Bachelor programme in biology.

**Responsible department:** Biology Education Centre

## LEARNING OUTCOMES

After the course, the student should have relevant working experience After completing the course, the student should be able to

- in extent and time delimit and plan for implementation of the training period
- carry out a compilation of the literature in the field
- give a correct oral and written presentation of the work training period

## CONTENT

The student participates in regular activities within industry, public administration or academic research. The student should under supervision or independently participate in work relevant to the subject.

## INSTRUCTION

The student is given private tuition at the working place

## ASSESSMENT

Written and oral presentation of the work training period

# Syllabus for Degree Project C in Biology

---

*Examensarbete C i biologi*

**15 credits**

**Course code:** 1BG214

**Education cycle:** First cycle

**Main field(s) of study and in-depth level:** Biology G2E

**Grading system:** Fail (U), Pass (G).

**Established:** 2008-03-13

**Established by:** The Faculty Board of Science and Technology

**Revised:** 2014-04-16

**Revised by:** The Faculty Board of Science and Technology

**Applies from:** week 27, 2014

**Entry requirements:** The basic course in biology 80 credits within the Bachelor programme in biology. For admission, a project plan approved by the department is required

**Responsible department:** Biology Education Centre

## LEARNING OUTCOMES

After the course, the student shall:

- be able to search for relevant scientific literature and critically summarise and interpret it
- be able to generate hypotheses to explain the observations made in the chosen area of specialisation
- be able to present his/her knowledge in Swedish, and to some extent in English, to different target groups, both in scientific and popular scientific styles
- have a good ability to handle text and present data (figures, tables), references, etc. according to the format specified for the particular genre
- be able to give constructive criticism of other students' manuscript drafts
- be able to present his/her knowledge in a poster in a pedagogic manner
- identify and in a structured way discuss ethical issues related to the topic the student has chosen.

## CONTENT

An individual assignment is carried out, where the knowledge from previously completed courses is applied. The work is carried out guided by a supervisor in close connection with ongoing research or development projects.

To achieve the aims, the student should

- under supervision delimit a scientific problem, examine this, interpret and evaluate the results and present the work oral and written
- search, evaluate and compile information relevant to the chosen problem
- participate actively in seminars and other activities on the workplace where the work is carried out

## INSTRUCTION

The teaching is designed individually depending on the specialisation of the project.

## ASSESSMENT

To pass, a passed oral and written presentation of the degree project at a seminar is required. The written presentation should consist of a scientific report, a popular summary and a summary in English.

To pass it is required, apart from passed presentations, that the student has participated actively in seminars drafts to the three presentations are discussed.

---

*Toxikologi*

**15 credits**

**Course code:** 1BG209

**Education cycle:** First cycle

**Main field(s) of study and in-depth level:** Biology G2F

**Grading system:** Fail (U), 3, 4, 5.

**Established:** 2007-03-15

**Established by:** The Faculty Board of Science and Technology

**Revised:** 2011-12-01

**Revised by:** The Faculty Board of Science and Technology

**Applies from:** week 27, 2012

**Entry requirements:** 80 credits in biology equivalent to the basic course in biology within the Bachelor Programme in Biology/Molecular Biology.

**Responsible department:** Biology Education Centre

After the course, the student should be able to:

- describe basic toxicological principles and describe how different chemicals are taken up by, processed in and eliminated from the body
- describe different the importance of different organs for detoxification/ toxification of chemicals, and describe mechanisms for chemically induced neurotoxicity and endocrine toxicity
- describe different behaviour tests and their importance to discover of different neurological and endocrinological disturbances
- describe when different chemicals are most toxic, and mechanisms behind the effects. Be able to discuss when and how different chemicals can interact under the development to induce effects
- describe different genetic testing methods and injuries after various types of ionising radiation
- apply different toxicological frameworks within the professional disciplines and have awareness about different risk assessment criteria

General toxicological principles and overview of toxic substances: The part includes basic description how substances are absorbed by, distributed and eliminated from the body. The part contains awareness about toxicokinetic models and the processes of biotransformation.

Toxicity in specific target organs ? effects and mechanisms: The part includes basic toxicological knowledge of the effect of chemicals on central organs that are of significance for the uptakes/elimination and detoxification/toxification. Basic knowledge about how the communication systems of

mechanisms behind chemically induced injuries and injuries after ionising radiation.

Toxicology in the society: Environmental toxicology, food toxicology, clinical toxicology, epidemiology, risk assessment.

Lectures, group tuition, seminars and laboratory sessions. Attendance at the laboratory work and connected lessons is compulsory. The course may be given in English.

Modules: Theory 10 credits: Written examination

Laboratory sessions 4 credits: Written laboratory reports

Literature assignment 1 credit: Written and oral presentation of literature assignment

A passing grade for the entire course requires passing grades for the laboratory work and seminars.

# Syllabus for Animal Structure and Function

---

## *Djurens struktur och funktion*

**15 credits**

**Course code:** 1BG203

**Education cycle:** First cycle

**Main field(s) of study and in-depth level:** Biology G2F

**Grading system:** Fail (U), 3, 4, 5.

**Established:** 2007-03-15

**Established by:** The Faculty Board of Science and Technology

**Revised:** 2015-04-10

**Revised by:** The Faculty Board of Science and Technology

**Applies from:** week 30, 2015

**Entry requirements:** 80 credits in biology equivalent to the basic course in biology within the Bachelor Programme in Biology/Molecular Biology.

**Responsible department:** Biology Education Centre

## LEARNING OUTCOMES

The aim of the course is to provide advanced knowledge of animals as integrated biomechanical and physiological organisms.

After the course, the student should be able to:

- describe and be familiar with how some selected organisms have been morphologically and anatomically adapted to a certain mode of life
- describe the most important organ systems and explain their functions
- draw conclusions about interrelationships and evolution through comparative anatomy and morphology
- describe and be familiar with different life cycles of selected groups of organisms
- describe important tissue types, such as muscle, connective tissue, bone, cartilage, kidney tissue, etc., on the basis of histological sections
- practically carry out detailed dissections of selected groups of organisms
- identify and discuss ethical aspects related to animal testing and other uses of animals in teaching and research.

## CONTENT

The course explores the connections between comparative morphology, histology, biomechanics and physiology. The information is presented within a phylogenetic framework. The focus lies on how structure and function are integrated, and how they differ between animals with different life styles. Invertebrates and vertebrates will be studied, with an emphasis on the latter.

In-depth knowledge of the animals' structure, for example through a systematic overview of different animal groups, their organ systems and tissue types. Overview of reproductive strategies, life cycles and evolution,.

The course consists of two modules: Invertebrates and Vertebrates. Invertebrates (theory 4 credits, practicals 2 credits) and Vertebrates (theory 6 credits, practical 3 credits).

## INSTRUCTION

The theoretical teaching is given as lectures and seminars. The practical teaching includes a field course and a series of laboratory practicals based on dissections and physiological experiments. Participation in laboratory practical, field course and seminars is compulsory.

## ASSESSMENT

Each module will have a written examination. To pass the course the student is required to pass both examinations (4 and 6 credits) and participate in the compulsory parts (2 and 3 credits).

# Syllabus for Ecotoxicology

---

*Ekotoxikologi*

**15 credits**

**Course code:** 1BG308

**Education cycle:** Second cycle

**Main field(s) of study and in-depth level:** Biology A1N

**Grading system:** Fail (U), 3, 4, 5.

**Established:** 2007-03-15

**Established by:** The Faculty Board of Science and Technology

**Revised:** 2017-04-27

**Revised by:** The Faculty Board of Science and Technology

**Applies from:** week 27, 2017

**Entry requirements:** 120 credits including (1) 60 credits in biology and 30 credits in chemistry or 30 credits in earth science, or (2) 90 credits in biology, in both cases including Toxicology, 12 credits.

**Responsible department:** Biology Education Centre

## LEARNING OUTCOMES

The main objective of the course is to give the students knowledge and skills that allow an overall assessment of the fate of foreign chemicals in the environment and of their effects on different biological organisation levels. To that end, the conceptual framework introduced during the course in toxicology will be further developed and used.

On completion of the course, the student should be able to

- describe sources and fates of chemicals in the environment
- present and explain mechanisms for adverse effects of chemicals
- estimate the risk for adverse effects of a chemical on different biological organisation levels based on knowledge about the toxicity, degradability, and bioavailability of the chemical
- retrieve and critically evaluate toxicological information from different sources (internet-based databases, hand books, scientific articles)
- independently carry out, and present orally and in writing, classification and labelling of chemicals dangerous for the environment
- independently carry out, and present orally and in writing, environmental risk assessment of chemicals

## CONTENT

**Environmental chemistry:** This part comprises an overview of different chemical groups of anthropogenic origin present in the environment. Focus is on their sources and fates in the environment.

**Effects of anthropogenic chemicals:** This part comprises negative effects of chemicals on different biological organisation levels (cell, organ, organism, population, ecosystem) with focus on mechanisms. An experimental study is carried out.

**Hazard assessment:** This part comprises retrieval and critical evaluation of toxicological information from different sources (internet-based databases, hand books, scientific articles etc.) for classification and labelling of chemicals. The students perform an individual project on classification and labelling of chemicals dangerous for the environment according to EU guidelines.

**Environmental risk assessment:** This part comprises environmental risk assessments of chemicals and is done as projects.

## INSTRUCTION

The teaching is given as lectures, seminars, a laboratory practi

Modules: Theory 8 credits; Project work 7 credits

The theory is examined through written examination. The module project work is examined through written and oral presentations and critical evaluation of other course participants' project reports.

# Syllabus for Plant Structure and Function

---

*Växternas struktur och funktion*

**15 credits**

**Course code:** 1BG206

**Education cycle:** First cycle

**Main field(s) of study and in-depth level:** Biology G2F

**Grading system:** Fail (U), 3, 4, 5.

**Established:** 2007-03-15

**Established by:** The Faculty Board of Science and Technology

**Revised:** 2012-11-28

**Revised by:** The Faculty Board of Science and Technology

**Applies from:** week 02, 2013

**Entry requirements:** 80 credits in biology equivalent to the basic course in biology within the Bachelor Programme in Biology/Molecular Biology.

**Responsible department:** Biology Education Centre

## LEARNING OUTCOMES

After the course, the student should be able to:

- Give examples of several evolutionary innovations essential for the terrestrial plants possibilities to establish and diversify in different environments
- Account for fundamental physiological/functional, genetic/developmental and phylogenetic/biodiversity aspects of these innovations
- Describe how we, from different perspectives, can illustrate and contribute to a more general understanding of the origin of evolutionary innovations and their underlying genotypic and phenotypic mechanisms
- Describe
  - fundamental aspects regarding phylogenetic relationships, morphology, anatomy and physiology of plants
  - the principles behind historical analysis of relationships and character evolution
  - molecular mechanisms behind important morphological and physiological innovations
  - the principles of inference for evolutionary mechanisms based on genomic variation
  - the principles for analysis of DNA sequences and gene expression
- Independently make use of phylogenetic trees to describe evolutionary patterns and analyse evolutionary causalities
- Perform and show practical skills in microscopy and genetic analysis
- Discuss and communicate principles, problems and research results for questions within the framework of the contents of the course

## CONTENT

During evolution, different morphological, structural and physiological innovations have had central importance for the possibility of plants to establish and diversify in different environments. The course focuses on some of these innovations, for example the origin of vascular tissue and flowers and how different plants adapt to their environment. The course provides a deep understanding of these evolutionary innovations from different perspectives. The subparts include:

Physiological/functional aspects of the evolutionary innovations covered by the course

Genetic-developmental biological aspects of evolutionary innovations covered by the course

Phylogenetic-biodiversity aspects of evolutionary innovations covered by the course

Project work: in connection to one of the involved research disciplines, and related to one or more of the learning outcomes, a practical or literature-based independent project is carried out.

## INSTRUCTION

The teaching consists of lectures, seminars, project work, study visits, and laboratory sessions. Participation in seminars, laboratory sessions, and project work are compulsory.

## ASSESSMENT

Parts of the course: Theory 8 credits, projects 3 credits, laboratory sessions 4 credits.

The theory part is examined by written exams, written and oral presentations of parts with PBL character. The project work is examined through a written and an oral presentation including peer-review on another project. Laboratory sessions and seminars require active participation.

*Forskningspraktik i biologi*

**15 credits**

**Course code:** 1BG225

**Education cycle:** First cycle

**Main field(s) of study and in-depth level:** Biology G2F

**Grading system:** Fail (U), Pass (G).

**Established:** 2012-03-08

**Established by:** The Faculty Board of Science and Technology

**Applies from:** week 27, 2012

**Entry requirements:** Biology, 80 credits equivalent basic course in biology within the Bachelor programme in biology.

**Responsible department:** Biology Education Centre

After the course, the student should have relevant working experience After completing the course, the student should be able to

- in extent and time delimit and plan for implementation of the training period
- carry out a compilation of the literature in the field
- give a correct oral and written presentation of the work training period

The student participates in regular activities within industry, public administration or academic research. The student should under supervision or independently participate in work relevant to the subject.

The student is given private tuition at the working place

Written and oral presentation of the work training period

# Syllabus for Degree Project C in Biology

---

*Examensarbete C i biologi*

**15 credits**

**Course code:** 1BG214

**Education cycle:** First cycle

**Main field(s) of study and in-depth level:** Biology G2E

**Grading system:** Fail (U), Pass (G).

**Established:** 2008-03-13

**Established by:** The Faculty Board of Science and Technology

**Revised:** 2014-04-16

**Revised by:** The Faculty Board of Science and Technology

**Applies from:** week 27, 2014

**Entry requirements:** The basic course in biology 80 credits within the Bachelor programme in biology. For admission, a project plan approved by the department is required

**Responsible department:** Biology Education Centre

## LEARNING OUTCOMES

After the course, the student shall:

- be able to search for relevant scientific literature and critically summarise and interpret it
- be able to generate hypotheses to explain the observations made in the chosen area of specialisation
- be able to present his/her knowledge in Swedish, and to some extent in English, to different target groups, both in scientific and popular scientific styles
- have a good ability to handle text and present data (figures, tables), references, etc. according to the format specified for the particular genre
- be able to give constructive criticism of other students' manuscript drafts
- be able to present his/her knowledge in a poster in a pedagogic manner
- identify and in a structured way discuss ethical issues related to the topic the student has chosen.

## CONTENT

An individual assignment is carried out, where the knowledge from previously completed courses is applied. The work is carried out guided by a supervisor in close connection with ongoing research or development projects.

To achieve the aims, the student should

- under supervision delimit a scientific problem, examine this, interpret and evaluate the results and present the work oral and written
- search, evaluate and compile information relevant to the chosen problem
- participate actively in seminars and other activities on the workplace where the work is carried out

## INSTRUCTION

The teaching is designed individually depending on the specialisation of the project.

## ASSESSMENT

To pass, a passed oral and written presentation of the degree project at a seminar is required. The written presentation should consist of a scientific report, a popular summary and a summary in English.

To pass it is required, apart from passed presentations, that the student has participated actively in seminars drafts to the three presentations are discussed.

**15 credits**

**Course code:** 1BG307

**Education cycle:** Second cycle

**Main field(s) of study and in-depth level:** Biology A1N, Technology A1N

**Grading system:** Fail (U), 3, 4, 5.

**Established:** 2007-03-15

**Established by:** The Faculty Board of Science and Technology

**Revised:** 2015-04-15

**Revised by:** The Faculty Board of Science and Technology

**Applies from:** week 30, 2015

**Entry requirements:** 120 credits including (1) 60 credits in biology and 30 credits in chemistry, or (2) 60 credits in chemistry, including Biochemistry, 15 credits, and 30 credits in biology, including 15 credits in molecular genetics.

**Responsible department:** Biology Education Centre

The course in microbiology gives the student knowledge on microorganismal morphology, metabolism, physiology, ecology and evolution. The student also gets training in problem-solving and critical analysis of scientific work within the subject area. This course prepares the student for in depth studies in the subject or for professional activities related to for instance biotechnological production, food handling and combating of infectious diseases.

After completing the course, the student should be able to

- account for the structure, organisation, metabolism and evolution of viruses, bacteria, archaea and eukaryotic microorganisms
- explain the life processes of chosen microorganisms at the molecular level and how these processes influence the environments as well as how environmental influences affect microorganismal differentiation, development of multi-cellularity, formation of biofilms, etc.
- account for the most common pathogenic microorganisms and their main virulence factors
- account for the use of genetically modified microorganisms (GMOs) within the biotechnology industry as well as review and discuss their use critically
- work safely with microorganisms in the laboratory and cultivate microorganisms from natural environments
- plan, carry out and analyse microbiological experiments, draw conclusions from these and design new testable hypotheses from generated and analysed data
- review scientific work critically within the subject area. and communicate knowledge within the field both orally and in written form
- identify and discuss ethical aspects related to genetic engineering and synthetic biology.

The course focuses on microorganisms in their natural context, including their relationship with the environment and other organisms. Central themes are the cells' structure and function, and molecular mechanisms underlying cellular function as well as interactions between organisms and their environment. Lectures and individual literature studies are complemented with practical exercises (laboratory work, seminars, etc.).

Microbial diversity and evolution: History, molecular phylogenetics, evolutionary mechanisms: plasmids, phages and horizontal exchange. Groups of bacteria, archaeons and unicellular eukaryotes. Methods for analysis of microbial diversity, metagenomics, and non-culturable organisms.

Microbial cell biology and developmental biology: Cell morphology, cytoskeleton, cell growth and division, compartmentalisation in bacterial cells. Bacterial cell cycle, DNA replication and chromosome segregation from a biological perspective. Motility. Signalling, biofilm, multicellularity, sporulation, differentiation.

Metabolism and physiology: Aerobic and anaerobic energy production, uptake and secretion mechanisms, cell wall synthesis. Environmental effects and adaptations to environmental changes, molecular mechanisms behind these adaptations. Growth, culturing, and culture

methodology (batch, chemostats). Growth phases, "non-culturable" resting phases.

Interaction, attack and defence: Symbiosis, virulence factors, secondary metabolism and their regulation. Antibiotic production and resistance to antibiotics.

Applications of the above for handling and controlling microorganisms in the society, e.g., in the food and biotechnology industries, and in connection with sustainable development. Ecological and evolutionary aspects of pathogens: how they have become what they are and how we can treat them. Genetic modification of microorganisms, implementation and ethical aspects.

Laboratory exercises: Microbiological work techniques, enrichment of bacteria and identification of them by physiological methods and bioinformatics, bacteriological water tests.

Seminars: Critical analysis of published articles and scientific data, calculation exercises concerning microbial growth, mini-symposium with critical analysis of recently reported research on a microorganism chosen by the student.

Instruction is provided in the form of lectures, seminars, laboratory sessions and on-site visit. Participation in seminars and laboratory sessions are compulsory.

Modules: Exercises (laboratory sessions and seminars) 5 credits; Examination I 5 credits; Examination II 5 credits.

The module exercises require active participation and laboratory reports and presentations according to instructions. The theory is examined through two written tests.

UNIVERSITET

# Syllabus for Evolutionary Genetics

---

*Evolutionär genetik*

**15 credits**

**Course code:** 1BG205

**Education cycle:** First cycle

**Main field(s) of study and in-depth level:** Biology G2F

**Grading system:** Fail (U), 3, 4, 5.

**Established:** 2007-03-15

**Established by:** The Faculty Board of Science and Technology

**Revised:** 2011-04-18

**Revised by:** The Faculty Board of Science and Technology

**Applies from:** week 27, 2011

**Entry requirements:** 80 credits in biology equivalent to the basic course in biology within the Bachelor Programme in Biology/Molecular Biology.

**Responsible department:** Biology Education Centre

## LEARNING OUTCOMES

On completion of the course, the student should be able to:

- describe the basic mechanisms behind evolution of DNA sequences and gene structure
- describe the principles for population genetics
- describe the latest progress within molecular genetics
- use molecular genetic laboratory methods
- describe the main fields of research and studies of modern evolutionary genetics.
- use available sources of information as well as basic laboratory methods to generate molecular genetic information

## CONTENT

The course focuses on the following concept and processes: Historical introduction to evolutionary genetics. Mutations: the source of genetic variation. DNA sequence evolution and mechanisms for molecular evolution. Population genetics: factors determining the composition and change in allele and genotype frequencies. Genetic markers and sequencing technologies. Mapping of genes: establishing the link between phenotype and genotype. Conservation genetics. Evolution of genetic systems, sex chromosomes and sex determination mechanisms. Speciation processes. Selfish genes: conflicts between genetic elements within an individual. Phylogeny: methods to analyse evolutionary relatedness between populations. Domestication: changes in the genetic composition of wild animals through selective breeding.

## INSTRUCTION

Lectures, laboratory sessions, seminars, discussion sessions, computer exercises, literature assignments and projects. Participation in lab practicals, computer assignments and project work is compulsory.

## ASSESSMENT

To pass the course, the students should:

- o complete practical exercises and lab reports, 4 credits
- o participate in seminars, 3 credits
- o pass an examination, 8 credits

The grading is based on the results of the examination. Satisfactorily performed laboratory sessions and discussions can give extra points. After the examination, the students are offered to mark his/her own examination and well performed marking will give extra points.

ASSESSMENT

# Syllabus for Immunology

---

## *Immunologi*

**15 credits**

**Course code:** 1BG313

**Education cycle:** Second cycle

**Main field(s) of study and in-depth level:** Biology A1N

**Grading system:** Fail (U), 3, 4, 5.

**Established:** 2007-03-15

**Established by:** The Faculty Board of Science and Technology

**Revised:** 2011-11-23

**Revised by:** The Faculty Board of Science and Technology

**Applies from:** week 29, 2012

**Entry requirements:** 120 credits including (1) 60 credits in biology and 30 credits in chemistry, or (2) 60 credits in chemistry, including Biochemistry, 15 credits, and 30 credits in biology, including 15 credits in molecular genetics.

**Responsible department:** Biology Education Centre

## LEARNING OUTCOMES

To give a broad and detailed overview of the field of immunology and detailed knowledge about many of the most important immunological technologies.

After the course, students will be able to

- use immunological terminology
- account for the different haematopoietic cell groups regarding phenotype, function and distribution
- account for how these cells are formed and in which organs this take place and how the cells are governed by growth and differentiation factors as well as cell adhesion molecules
- explain differences between the adaptive and non-adaptive (innate) immune defence regarding specificity, memory and kinetics
- account for the different genetic - and selection mechanisms at the molecular and cellular level, that governs the formation of the enormous numbers of antigen-specific receptors, immunoglobulins and T-cell receptors, that are the basis for the adaptive immune defence in vertebrates
- account for the immune response against different pathogens and how these pathogens through different virulence factors influence the immune system possibilities to combat the infection
- account for the mechanisms and components that participate in an inflammatory response
- compare different immunological diseases and the genetic basis for these at the molecular and cellular level
- account for the immune response against tumours and transplanted tissue
- account for various types of immunotherapies and vaccinations
- account for different immunological methods and be able to apply a number of these
- analyse data from immunological trials, draw conclusions and generate hypotheses

- plan and carry out an immunological project with literature search and present the results written, in the form of a summary, and orally, in the form of a scientific presentation
- critically review both data - and review papers.

## CONTENT

The student achieves the aims by acquiring knowledge of the immune system, its subcomponents and molecular and cellular processes for development of the immune system, how the immune system functions in healthy people and in immunological disease, cancer and transplantation and how immunotherapies and vaccinations can be used to hamper or prevent disease. This knowledge is acquired through lectures that cover the whole field of immunology through self-studies and through laboratory sessions, where students learn important and common immunological methods. The student obtain a scientific work procedure and approach through careful documentation of his/her laboratory work in a laboratory journal and problem-solving at seminars, where scientific data are analysed (theoretical practical assignments).

Immunological projects with literature search, in addition to oral and written reports of scientific data, give skills in how to find information and how to structure and present this information.

Several parts of the course have labour market links:

- Bases in scientific work and approach.
- Skills in documentation and critical evaluation of scientific data
- Oral and written presentation in both English and Swedish.
- Through their broad and solid knowledge in immunology, the students will be attractive on the labour market for both small, medium, and large biotechnology companies, pharmaceutical industry and humanitarian aid projects.

## INSTRUCTION

The teaching is given in the form of lectures, project work, theoretical practical assignments and laboratory sessions. Participation in project work, theoretical practical assignments and laboratory sessions are compulsory.

## ASSESSMENT

Modules: Theory 9 credits; Laboratory session 3 credits; Exercise 3 credits

The theory module will be examined through two written tests, 1) theoretical knowledge, and 2) theoretical knowledge and theoretical laboratory skills and analysis of data and immunological problems. For the module laboratory sessions, accomplished laboratory sessions including laboratory reports, are required. The module Exercise requires implemented theoretical practical assignments that are presented orally, and active participation in project work that is presented in written form and orally.

# Syllabus for Neurobiology

---

## *Neurobiologi*

**15 credits**

**Course code:** 1BG207

**Education cycle:** First cycle

**Main field(s) of study and in-depth level:** Biology G2F

**Grading system:** Fail (U), 3, 4, 5.

**Established:** 2007-03-15

**Established by:** The Faculty Board of Science and Technology

**Revised:** 2017-04-27

**Revised by:** The Faculty Board of Science and Technology

**Applies from:** week 27, 2017

**Entry requirements:** 80 credits in biology equivalent to the basic course in biology within the Bachelor Programme in Biology/Molecular Biology.

**Responsible department:** Biology Education Centre

## LEARNING OUTCOMES

After completing the course, the student should be able to

- describe the structure and function of neurons and glia cells
- describe how neurons are connected in neuronal circuits that control our behaviour
- describe the central nervous system, the autonomous nervous system and the peripheral nervous system including the structure and function of the sensory organs and describe and analyse how the interactions between these and the most important transmitters influence the functions of the body
- describe some of the functions of the nervous system such as the regulation of , movement, motivation, pain, emotions and memory
- describe neurological disorders such as Parkinson's disease, addiction, schizophrenia, depression
- analyse a given theoretical problem/case, identify gaps in knowledge and retrieve knowledge independently to be able to present a scientifically sound solution
- give an account for the current neurobiological techniques, such as brain histology, optogenetics, electrophysiology and electrochemistry, behavioural analyses, transgenics
- identify and apply a suitable method theoretically or practically to address the research question at hand
- compile and present a literature study and develop an ability to critically analyse and discuss science by reviewing texts in public and scientific papers
- identify and discuss ethical issues related to scientific activities.

## CONTENT

The course structure is aimed at in-depth knowledge of the molecular and cellular neurobiology and basic knowledge of general neurobiology. The emphasis is on mammalian neurobiology, particularly humans. Course introduction focuses on neuroanatomy and basic cellular mechanisms such as neurotransmitter release and electrophysiology. It then describes more integrated functions of the nervous system from the molecular to the cognitive level, such as the different senses (sight, smell, etc.), musculoskeletal neurobiology, reward system, biological rhythms, emotions and pain. The course also describes the current methods in neuroscience research.

## INSTRUCTION

The teaching consists of lectures, laboratory sessions, problem-based learning sessions and literature seminars.

## ASSESSMENT

To pass the course, passed participation in compulsory part (laboratory sessions, problem-based learning sessions, seminars and literature seminars), passed laboratory report, passed oral half-time examinations and passed results of examination are required. Credit points of the

modules are: written exam 9 credits, laboratory sessions 2 credits, seminars, 2 credits, the literature assignment seminars 1 credit, and oral exams 1 credit.
